EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended to correct an obvious and minor typographical error, see description, paragraph 19, ll. 5-9 for support.

In claim 6, l. 4, "is at least is less than" has been changed to -- is at least less than --.

In claim 7, l. 4, "is at least is less than" has been changed to -- is at least less than --.

Figure 2 has been selected by the Examiner to be printed on the face of the patent. It has been amended as per the attached drawing to make the claimed invention readily apparent.

Drawings

2. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the Examiner amended Figure 2, and the draft person objected to the drawings as they have been filed. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Allowable Subject Matter

3. Claims 1-9 are allowed.
4. The following is an examiner's statement of reasons for allowance: prior art does not teach in combination with the other limitations of the independent claims the apparatus and the method of using it wherein from start-up throughout an intermediate and full load of a combustion chamber, the pilot burner first and the main burner thereafter are fueled through a first valve, and during said intermediate and full load of the combustion chamber the pilot is fueled only through a second valve of a substantially lower flow capacity than the first valve.
5. Note that in US Patent 5311742 to Izumi, even if the fixed orifice 27 would have been replaced with a valve, the present independent claims would still not read on Fig. 1, because valve 25 for the main and valve 26 for the pilot are distinct from each other, and valve 14 turns on/off all three valves. Regarding WO 01/839965 note that throttling valve 9 both precedes and follows the activation of pilot valve 5, and valve 5 does not feed the main burners.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

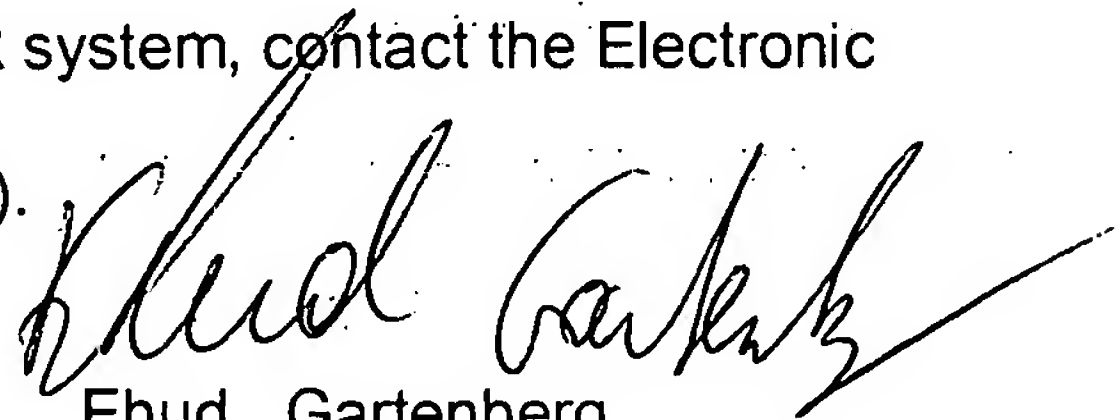

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Marshall 5402634, Eroglu 2004/0088996, Hoffman 6425239, Onoda 6330789.
